

How to do...

Ideal cleaning and maintenance of all oiled, waxed or soaped wood surfaces. Especially suitable for floors, furniture, panels and worktops. Due to the nourishing properties of the Natural Soap the surface is given optimum protection. Natural Soap white is recommended for light wood species, while Natural Soap natural is ideal for dark wood. May be used for the cleaning and maintenance of all known oil systems.

- 1 Before you start ensure you shake Natural/Master Soap container. Have two buckets handy.
- 2 In one bucket mix 1 part soap to 40 parts lukewarm water = 125mls of Natural Soap (1/2 cup) into 5 litres of lukewarm water - this makes the Soap Solution.
- 3 Fill the remaining bucket with clean rinsing water. It is recommended always to work with 2 buckets (1 x soap solution and 1 x clean rinsing water). Using 2 buckets avoids contaminating the soap solution with the dirt from the floor.
- 4 Clean floor with soap solution with a soft wrung mop - leave soap solution on floor briefly in order to dissolve dirt. Work in manageable sections. Rinse mop in clean water and wring hard.
- 5 Then place mop in soap solution and wring hard. Use mop to remove dirty soap water off floor. Rinse mop in clean water and wring hard. Repeat steps 4 - 5.

At the same time as cleaning your floor this process re-establishes the protective Natural Soap film.

WOCA Natural Soap

- for the cleaning of wood surfaces and for the basic soaping of softwood floors

Natural Soap is a purpose-made quality soap, which due to its nourishing properties quickly closes the pores of the wood and protects against dirt and penetration of liquids.

Available in

Natural Soap is available in the container sizes of 1, 2.5, 5 natural and white.

Tools

2 plastic buckets, mop.
